

POSITIONING SECURITY WITH A 10 YEAR WARRANTY

Isotec Security provides the world's most secure weapons control and Security Entrances for Banks and Credit Union with our High Security doors and tamperproof High Security closers. Our competitors only provide the conventional doors, like those used in convenience and liquor stores, whose mechanisms can be rendered useless in seconds, bare handed. Truth be told, these constructs are just interlocking doors not Security Entrances. Security Entrances should withstand acts of malice, vandalism and hostile intent. Security Entrances must also provide for unfettered Emergency Exit. With their doors easily susceptible to vandalism, interlocking doors with external closers can be easily disabled, thus denying emergency exit.

Presentation styles aside, ask any customer considering or currently using a competitor's product if the doors used can withstand a simple act of vandalism let alone an act of terrorism as Isotec Security doors are designed to do. Why pay \$40,000 - \$50,000 for a faulty design that can be incapacitated in seconds and become a threat to life safety? We believe, if after testing and vetting, the federal government finds such designs ineffective, so should private industry. Think that through, paying for a false sense of security and the liabilities that go with it.

Isotec High Security closers have a 10 Year Warranty. *Isotec Security has yet to replace a High Security door component. As an additional testament to durability, Isotec Security systems have been disassembled, crated, relocated and re-installed. While not recommended, some Isotec Security doors have gone without service for as much as 8 years.*

Isotec Security will continue to offer the similar interlock door constructs our competitors offer with our Interlocking Ballistic and Deterrent series. However, I suggest positioning to your customers that which your competition cannot; a 10 year warranty on High Security doors that can withstand earth quakes, hurricane force winds and projectiles, acts of vandalism and terrorism, with our High Security Ballistic series.

*Our **High Security Ballistic** series is currently under review by the **Department of Homeland Security** for designation and certification as a **Qualified Anti-terrorism Technology** and is the mainstay for security entrance and egress throughout installations spanning the departments of Defense, Energy and Justice.*

Thank you for your support,

*David Barnes
