

Manage Your Physical Security From a Single Console With ICON - The Integrated Security Management Solution From Isotec.

ICON

Integrated Security Management or the ability to monitor and control multiple security and access control events from a single security platform is the core of the “Power of ICON”. Based on site specific video analytic technology developed in the Isotec labs, ICON integrates multiple security and business system platforms with multiple vendor input into a single effective platform. This single console platform for management of multiple locations means fewer operators and less uncertainty during an event. Furthermore, ICON interfaces are simple to combine with new or existing credential, biometric, asset detection and material screening (X-Ray, SNM, Metal Detection & Video Inspection) systems.

ICON allows the client to implement in house, proprietary rules and decision making trees all along the system. Integrated into your system, the automated

logic creates event-driven client protocols where predefined responses to alarms or a combination of events are system automatic. Algorithms that provide synergistic decision support prioritize alerts, multi-level alarms, response requirements and time based protocols. Event and transaction logging supported by automatic archiving allows for tracking of manual or remote overrides of the automatic operations. This “Automation of Task Protocol” means less operator intervention expediting security response times and lowering training and user costs.

Operator interface and workload are further simplified by the application of Intuitive Graphical Interfaces that are employed with photos, maps, or drawing of the facility and zones within the facility. These are displayed on a main screen with multi-zone access to view a variety of alarms, indicators, and sensors that continuously monitor real time events, and data for more accurate and timely processing. With IP based interconnections local, site-wide or nation wide interaction is easily achieved from single or multi-interfaced locations.

- ***Intuitive User Interfaces***
- ***Integrates Diverse Systems***
- ***Full System Management from a Single Screen***
- ***Custom Designed to the Specific Application***

Manage Your Physical Security From a Single Console With ICON - The Integrated Security Management Solution From Isotec.

Synergistically Combines:

- *Automated Security Portals*
- *Related Doors and Devices*
- *Presence Sensors*
- *Weapons Detection*
- *SNM Detection*
- *Material Inspection*
- *Anti-Tailgating*
- *Video Surveillance*
- *Video Motion Detection*
- *Intercom system*

Custom

- *Application Specific*
- *Custom Algorithms*
- *Personnel, Vehicles, Materials*
- *Variety of Integrated Detectors*
 - *Metal*
 - *SNM*
 - *Weight*
 - *Anti-Tailgating*
 - *Left Objects*
